

# How to use BioPRYN<sup>®</sup> with timed artificial insemination

- **Day 0** Day of artificial insemination (AI)
- **Day 16** Place cleanup bulls with females
- **Day 30** Bleed animals to determine those females that settled to the AI breeding. (30 days after breeding)
- **Day 76-106** After a 45-60 day breeding season, remove bulls
- **Day 106-136** 30 days following bull removal, bleed females for final pregnancy detection using BioPRYN<sup>®</sup>
- **Day 111-141** Remove and market all females determined open by BioPRYN<sup>®</sup>

BioPRYN<sup>®</sup> allows the producer to take advantage of the market early thus, **maximizing profit.**
