

How to use BioPRYN[®] with embryo transfer

- Day 0 Day of embryo transfer (ET)
- Day 10 Place cleanup bulls with recipients
- Day 25 Bleed females to determine those animals that settled to the AI breeding. (25 days after ET)
- Day 55-70 After a 45 – 60 day breeding season, remove bulls
- Day 85-100 30 days following bull removal, bleed females for final pregnancy detection using BioPRYN[®]
- Day 100-141 Remove and market all females determined open by BioPRYN[®]

BioPRYN[®] allows the producer to take advantage of the market early, thus **maximizing profit.**
